

About Dutch Regulators

Dutch Regulators is a company located in The Netherlands manufacturing stainless steel pressure regulators for gas and liquid applications. The main focus of Dutch Regulators is supplying high quality products, by understanding the needs of the users.

Dutch Regulators is a company with many years of experience in designing and manufacturing high quality pressure regulators.

Our certified Quality Management System according to ISO 9001:2015 is approved by Lloyds Register Quality Assurance.

Every regulator that leaves the company is fully tested according to the Pressure Equipment Directive PED 2014/68/EU. If necessary we invite a notified body to check the regulators. The materials of all parts are fully traceable by the marked batch-number. On request 3.1 material certificates can be supplied according to EN 10204.

Product range

The regulators are available as pressure regulators and back-pressure regulators in the size from 1/4" up to 4" connections.

The regulators are divided in the categories:

- General Industrial – Threaded regulators
- General Industrial – Flanged regulators
- Pharmaceutical regulators
- Tank blanketing regulators

Design pressures over the whole range of regulators is 16 bar, 50 bar, 280 bar and 420 bar.

There are models available with a large diaphragm for higher accuracy in the lower pressure ranges.

Many types of connections are possible.

Production and sales

The engineering, assembly and testing of the regulators is done in house at Dutch Regulators. All parts are produced externally by carefully selected subcontractors, at the specifications of Dutch Regulators.

Also the welding of flanges is done externally.

For the sales and support we work with local distributors who can provide you with a good advice for the regulators and our additional possibilities.
